

AquaPure™ Low Cat

Aquapure Low Cat is a powdered, cationic flocculant. When used as directed, this polymer works well in massing together suspended solids. Aquapure Low Cat may be used in conjunction with conventional Hydroxide precipitation as well as secondary precipitation in clustering organic precipitate into a manageable mass.

Features & Benefits

Easy to use Cationic powdered flocculant	Long shelf life
Versatility when used with inorganic and organic coagulants	Masses together precipitate in primary and secondary treatment systems

Operating Conditions

Aquapure Low Cat can be made up in a day tank (dilution tank) at a dilution of 0.1% by weight in combination with tap water. The tap water should have a low hardness to get the greatest efficiency. Mixing should be done by an over the side mixer for 1 hour or until you pass the fisheye stage. Turn the mixer off and allow the polymer to age for 1 hour prior to dosing. Consult with your Aquapure Specialist for bench testing to determine the dosage best suited for the application.

Caution

Keep Dry

If spilled sweep up as much as possible before getting wet.
